

## April 04<sup>th</sup> - Weekly Update

### Front-End Team [ Prasanna and Kavya ]

- Move from one image to the next image, only that image corresponding polygons to be displayed in the right panel.
- Edit of group id of annotated object to be added in setup.
- JSON is being dumped in a folder with the image name as its filename.

### Next Steps

- Delete of the individual annotated component.
- Once someone restarts the tool, the tool will load the json if it is already annotated and display that output.
- Zoom and unzoom operation of the canvas.

- Point to mask and mask to point facility to be added to tool

Back-End Team [ Aravinthakshan and Janak ]

- workflow for api is done and tested, in flask segment\_video frame by frame and parameter and whether to use previous annotations is also added.
- Xmem setup to be verified from back end for one image propagation for multiple segment masks in an image.
